# Atchutha Sai Kiran

saikiranatchutha05@gmail.com | +91-9398454257 | Linkedin | Github | Scaler

## Skills

- Python, Python Libraries, Machine Learning, Statistical Modelling, EDA, Natural Language Processing (NLP), SQL, Tableau, Excel, BigQuery, Power BI, Google Cloud / GCP

## Experience

**Business Analyst Intern,** O2 Saver Private Limited Apr 2026 - Jul 2026

- Gathered and documented business requirements from stakeholders to support process and reporting improvements.
- Engaged prospective customers through outreach conversations, building an understanding of customer needs and pain points as part of business development efforts.

**Data Annotation Freelancer,** Handigital Feb 2026 - Mar 2026

- Followed structured QA workflows and acceptance criteria across 1,000+ annotation tasks, maintaining a 95% quality score supporting LLM training pipelines.
- Applied consistent classification and validation standards, working independently against defined quality benchmarks.

## Projects

**Visual Product Matcher**

- Shoppers often can't find products by keyword search alone when they only have a reference image.
- Built a Streamlit app using OpenAI's CLIP model to generate image embeddings and retrieve visually similar catalog products via similarity search.
- Delivered instant, accurate visual matches (~90% accuracy) from a single uploaded image, improving product discoverability.

**Netflix Content Analytics & Business Intelligence**

- Netflix needed data-driven insight into content trends to guide investment and global content strategy.
- Performed EDA in Python on Netflix's catalog, analyzing content type, genre, country, and release-year trends.
- Surfaced actionable recommendations — including regional content investment in India, South Korea, and Latin America — to support content acquisition strategy.

**Yulu Demand Analytics Case Study**

- Yulu needed to understand which factors drive electric-cycle rental demand to improve revenue and operational efficiency.
- Ran EDA and hypothesis testing (t-test, ANOVA, Chi-Square) on 10,800+ rental records to isolate the effect of weather, season, and working days on demand.
- Identified season and weather as statistically significant demand drivers ($p < 0.001$), enabling data-backed recommendations for dynamic pricing and targeted marketing.

## Education

**Parul University, Gujarat,** BE/B.Tech/Bs 2026

B.Tech, Computer Science & Engineering (AI Specialization)

## Achievements

- SQL Certification – Scaler Academy
- Python Libraries Certification – Scaler Academy
- Data Analytics Essentials – Cisco Networking Academy
- Business Analyst Internship Certificate – O2 Saver Private Limited
